CONTRACTORS

Graffiti Management. - Weis Contractors is a family owned and operated Business and has been in operation since 1999 in the external cleaning industry. We specialise in graffiti removal and protection, high pressure cleaning; stain removal, mould remediation, odour removal and sanitation and soft fall sand cleaning. If you need more information on any of our services, please don't hesitate to call or visit our website at weiscontractors.com.au

Health & Safety - Soft fall. - Our playground cleaning procedure extends to the your sandpit. To remove the rubbish, broken glass and other items that build up in sand over time we offer a sand sifting service. Our sand cleaner can sort sand to a depth of 200mm and pick up particles as small as 3mm in width.

Non abrasive cleaning. - Some the benefits of water blasting are :

- Entry / street appeal
- Reduction of exposure to OH&S
- Surface sanitation
- Maintaining a non slip surface

With over 20 year's of pressure cleaning experience, we can handle any sized job from paths and driveways, up to tennis courts and large car parks. We can handle domestic and commercial sized jobs.

Non abrasive - stain removal. - Oil stains on your concrete not only look unsightly, but they are also, potentially a dangerous slip hazard. Oil stains can be one of the more difficult stains to remove because the oil is able to soak into porous surfaces like concrete. The type of oil spill effects the method we use in the removal process. Hydraulic oil, gearbox oil, cooking oil and engine oil that has carbon in it from your engine , will all require different processes when it comes to cleaning up the mess.

Chewing gum removal. - We use the Vaga Dry Steam Machine which uses only 5 litres of water per hour. The Vaga can also be used without the need for chemicals. When needed though, we embrace the Recycler, a small electric pressure cleaner that recovers and recycles its own water thus reducing the quantity of chemicals needed and used. This process not only removes the chewing gum but also cleans the underlying surface resulting in a fresh new pathway.

Mould inspection - Mould is detectable by smell and the signs of water damage on walls or ceilings. It can, and often does grow in places that are normally invisible to the naked eye. All inspections are conducted by a licensed QBCC trade qualified painter / trade qualified engineer.

Protective floor coating. - Anyone can grab a high pressure cleaner and clean a concrete surface, but for long term success it's the process and combination of assessing the type of surface you have and using the correct products. Concrete surfaces are porous so sealing them with the correct protective coating is paramount to ensuring the best success for the job. And not any sealant will do. It has to be the right one for the type of surface you are applying it to and the conditions the surface is subjected to on a daily basis. All works are completed by a licensed QBCC trade qualified painter / trade qualified engineer.
